***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on September 22, 2011 has been entered.

***Allowable Subject Matter***

Claims 1, 4, 5 and 7 to 14 are allowed.

The following is an examiner's statement of reasons for allowance:

An austenitic stainless steel having high stress corrosion crack resistance containing in percent by weight: 0.03% or less C, 0.02% or less Si, 0.85% or less Mn, 0.03% or less P, 0.002% or less S, 11 to 20.1% Ni, 17 to 30% Cr, 1.03 to 3% Mo, and 0.003% or less N, the balance substantially being Fe and unavoidable impurities, and having a stacking fault energy (SFE) calculated by the following equation (1):  $SFE (mJ/m^2) = 25.7 + 6.2 \times Ni + 410 \times C - 0.9 \times Cr - 77 \times N - 13 \times Si - 1.2 \times Mn$  that is 100 (mJ/m<sup>2</sup>) or higher (instant claims 1, 4 and 5); and its manufacturing method (instant claims 7 and 8) and its named product, a structure in a nuclear reactor or pipe for a nuclear reactor (instant claims 9-14) are not taught or fairly suggested by prior art of record applied in last office action dated April 1, 2011 for the reasons stated in Applicant's remarks filed September 22, 2011.

As noted by Applicant, U.S. Patent No. 3,563,728 (Allio et al.) is directed to a steel containing up to 0.05% Mo whereas instant claims require 1.03-3% Mo; and European patent 789089 (Yonezawa et al.) is directed to a steel containing 25-40% Ni whereas instant claims require 11-20.1%Ni. Consequently, there is no overlap in alloy wt.% ranges and a prima facie case of obviousness is not established.

In addition, European patent 530725 (Kato et al.) teaches a steel having alloying constituents whose wt.% ranges overlap those recited by instant claims but does not satisfy or closely meet stacking fault energy (SFE) equation at  $100(\text{mJ}/\text{m}^2)$  or higher. Applicant has discovered by restricting  $\text{SFE} \geq 100 (\text{mJ}/\text{m}^2)$  in a Mo-containing low-carbon austenitic stainless steel in accordance with the present invention, the stress corrosion crack length of steel becomes shorter resulting in significantly improved stress corrosion crack resistance. Criticality is demonstrated by test data in tables 1-4 and figure 8 of instant specification. Therefore instant claims patentably distinguish over cited art in view of new and unexpected properties.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Deborah Yee whose telephone number is (571) 272-1253. The examiner can normally be reached on Monday - Friday: 6:00am to 2:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Roy King can be reached on 571-272-1244. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
